eTrackr – the eLights system

| ProMonitor	eTrackr
There is no direct equivalent to the eLights system in ProMonitor. The attendance flag is but one of the functions fulfilled by the eLights performance monitor. 	The traffic light system known as eLights represents overall performance and combines attendance with unit scores, progress reviews and causes for concern that haven't been resolved. Hovering over the traffic lights provides an overview of why the student is set at a certain level. Firstly, find the student required from the **My Students** section of eTrackr. The individual student **eILP dashboard** will now be visible. In the left-hand panel there is a set of '**traffic lights'**. **Hover** your mouse over the lights to get an **overview** as indicated below. In this example, the student is rated amber because the latest progress review rating was below target.

To expand on the detail given at the top of this handout, the following table shows what is included in the eLights and how the ratings function:

Item	Amber	Red
Unit Score	0 or below	0 or below
Present attendance % thresholds in the last 2 months	89% or below	84% or below
Late attendance % thresholds in the last 2 months	10% or above	15% or above
Total unresolved causes for concern in last 2 months	2 or above	3 or above
Progress review (based on last review)	Details always taken from the latest published review	

N.B. It is possible to omit a particular student from the eLights rating statistics by ticking the box next to the traffic lights.

eLights reports can be viewed by clicking the **Analysis & Reporting** option in the left-hand **navigation** panel.

In this example, we have chosen eLights status and are viewing a pie chart of the ratings for a specified group.
